

How to install.

Start by opening your File Manager (I use Dolphin) and press CTRL + H. This shows all hidden files. Now rename your .bashrc file. (files with a .name are hidden files.)

now copy the new `bashrc` file in here.
For Arch now open the terminal.

If You see something like this youre done.
If not for Arch type : `yay -S neofetch`

For Debian type: `sudo apt install neofetch`

If none of the above Commands help use this Guide on Github.
